(54) Title: A PROCESS FOR MAKING DETERGENT COMPOSITIONS WITH ADDITIVES

(57) Abstract: Process incorporating an organic solvent and being composed of detergent components present together within spe-
cific ranges have now been found so as to produce a non-aqueous liquid detergent composition without the attendant drawbacks of
non-aqueous liquids. In particular, this process produces a liquid detergent composition which is easy to handle in bulk, has excellent
long-term stability and is readily soluble in a wash liquor.
